

ERP Vendors, Software Extensions, and Industry Trends

Presented by: Jay Michael M. Castillo

What is an ERP Vendor?

ERP vendors are like the *architects* of business software. They design systems that help companies run all departments — finance, HR, logistics, sales, even manufacturing — under one digital roof.

Architects of Business Software

Vendors design systems that integrate all core business functions.

The Enterprise Nervous System

ERP systems act as the central brain, connecting finance, HR, logistics, and operations.

One Digital Roof

Unifying disparate departments under a single, cohesive software platform.

Major ERP Vendors

S

SAP

- Global Leader: Over 12 million users worldwide, vast market share.
- Gold Standard: Complex, powerful, built for global scale and nearly every industry.
- Focus: High-end, multinational corporations.

O

Oracle

- Database Strength: Known for secure, accurate, and fast data management.
- Strategic Acquisition: PeopleSoft integration boosted HR and finance modules.
- Focus: Large enterprises requiring robust database foundations.

Major ERP Vendors

Infor

Third largest vendor, specializing in manufacturing, logistics, and supply chain. Offers deep industry customization.

Microsoft Dynamics

Built on the familiar MS platform. Integrates seamlessly with Office 365 and Azure. Great for small-to-midsize businesses (SMEs).

Lawson

Targeted sectors: retail, healthcare, and public service. Focuses on tailor-made solutions for specific industry needs.

Major ERP Vendors

SSA Global (Baan)

Acquired Baan in 2004;
emphasizes faster and
efficient ERP deployment.

SSA Global's promise was
speed — deliver ERP
benefits faster, without
waiting months or years.

Epicor

Targets mid-market
companies.

Offers modular ERP — start
small, expand later.

Epicor is like building
blocks — companies can
add only what they
need.

Evolution of ERP: Modern Trends

E-Business Integration

ERP connects web stores, payments, and digital supply chains in real-time.

Competition & Innovation

Competition among SAP, Oracle, and Microsoft forced rapid innovation — more modules, faster systems, and smarter analytics.

ERP for SMEs

Cloud-based, affordable options like SAP Business One democratize ERP access for smaller companies.

Evolution of ERP: Modern Trends

Service-Oriented Architecture (SOA)

Shift from one giant system to modular components, allowing companies to pick only necessary services.

Software as a Service (SaaS)

Cloud ERP means you rent software instead of buying it — always updated, always accessible, no expensive servers needed.

Social & Open-Source ERP

ERPs now include chat tools, dashboards, and communities.

Plus, open-source options like Odoo and ERPNext make ERP affordable for smaller companies.

Key Takeaways

ERP vendors continue to evolve — from desktop systems to cloud platforms powered by AI.

They now serve everyone — from small startups to global corporations.

And as technology keeps moving forward, ERP systems will remain the backbone of every intelligent business.

Thank You
