

ERP Vendors, Software Extensions, and Industry Trends

Presented by: Jay Michael M. Castillo

What is an ERP Vendor?

ERP vendors are companies that create and provide Enterprise Resource Planning (ERP) software to help organizations manage key business processes such as finance, human resources, and supply chain. Major ERP vendors include **SAP**, **Oracle**, and **Microsoft**, offering continuous development, updates, and support for their ERP systems.

Key functions of ERP vendors

Software Development

They create and publish the ERP software that businesses use to manage various operations in a single, unified system.

Product Updates

They are responsible for updating the software to fix bugs, add new features, and keep up with industry changes.

Implementation

They may help with the implementation of their software, although many also rely on third-party "partners" or specialized companies for this service

Support

They provide ongoing support and service for their products to help businesses run their systems effectively.

Major ERP Vendors

SAP (Systems, Applications, and Products in Data Processing)

Global Leader: Over 12 million users worldwide, vast market share.

Gold Standard: Complex, powerful, built for global scale and nearly every industry.

Focus: High-end, multinational corporations.

Major ERP Vendors

ORACLE

Database Strength: Known for secure, accurate, and fast data management.

Strategic Acquisition: PeopleSoft integration boosted HR and finance modules.

Focus: Large enterprises requiring robust database foundations.

Major ERP Vendors

Infor

3rd largest enterprise software provider.

Focus: Supply Chain, CRM, Supplier Management.

Known for integration and flexibility.

Major ERP Vendors

Microsoft Dynamics

Built on the familiar MS platform.

Integrates seamlessly with Office 365 and Azure.

Great for small-to-midsize businesses (SMEs).

Major ERP Vendors

Lawson

Provides industry-specific ERP solutions for healthcare, retail, and public services.

Focuses on finance, human resources, procurement, and enterprise performance management.

Helps organizations improve efficiency and decision-making with real-time business insights.

Major ERP Vendors

SSA Global

Known for fast and efficient ERP implementation, ideal for businesses wanting quick results.

Acquired Baan in 2004, expanding its product line and customer base.

Delivers ERP solutions designed to accomplish specific goals in shorter time frames.

Major ERP Vendors

Epicor

Focuses on mid-sized companies in manufacturing, distribution, and retail sectors.

Offers both complete ERP systems and specialized business applications.

Known for flexibility, scalability, and strong customer support worldwide.

Software Extensions, and Trends

E-Business Integration

ERP connects web stores, payments, and digital supply chains in real-time.

Competition & Innovation

Competition among SAP, Oracle, and Microsoft forced rapid innovation — more modules, faster systems, and smarter analytics.

ERP for SMEs

Cloud-based, affordable options like SAP Business One democratize ERP access for smaller companies.

Software Extensions, and Trends

Service-Oriented Architecture (SOA)

SOA allows ERP systems to be modular — companies can buy and use only the parts they need instead of the whole system.

Software as a Service (SaaS)

Cloud ERP means you rent software instead of buying it — always updated, always accessible, no expensive servers needed.

Social & Open-Source ERP

The future trend includes open-source ERP systems (like Odoo) and social networking features (collaboration, live communication, etc.).

Key Takeaways

ERP vendors continue to evolve — from desktop systems to cloud platforms powered by AI.

They now serve everyone — from small startups to global corporations.

And as technology keeps moving forward, ERP systems will remain the backbone of every intelligent business.

Thank You
